

Advanced Product Customer Grouping Analysis Project

P o w e r Q u e r y P r o j e c t

Project Overview

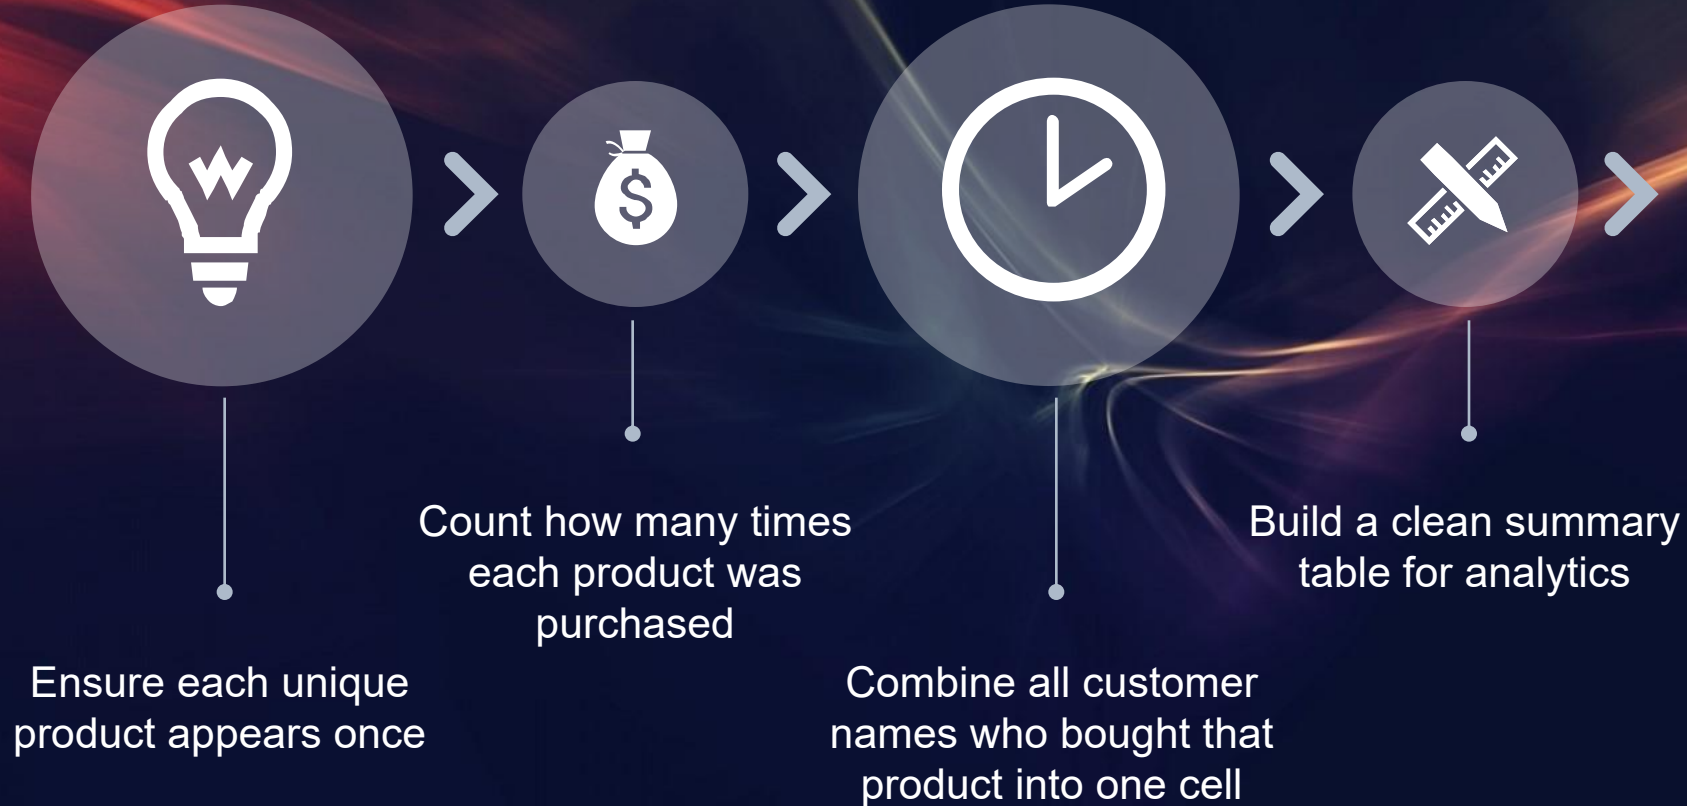

- Real-world customer-product analysis using Microsoft Power Query
- Worked on transactional dataset with key fields:
 - Product Name, Customer Name, Quantity, Price, Purchase Date, City, Payment Mode
- Focused on handling repeated customer names and summarizing purchase behavior

	A	B	C	D	E	F	G	
1	Product Name	Customer Name	Quantity	Price	Purchase Date	City	Payment Mode	
2	Water Bottle	Manish Kumar	1	15891.97	02-08-2025	Chennai	Net Banking	
3	Mixer Grinder	Suresh Reddy	4	52458.23	30-04-2024	Hyderabad	Net Banking	
4	Desk Lamp	Pooja Patel	2	19182.6	21-04-2025	Jaipur	Cash	
5	Wall Clock	Pooja Patel	3	65840.89	28-06-2024	Hyderabad	Debit Card	
6	Mixer Grinder	Kavita Das	2	67314.95	07-03-2024	Pune	Credit Card	
7	T-shirt	Rekha Soni	4	40600.16	14-07-2024	Pune	Cash

Learning Scope

What This Project Demonstrates

- Real-world data aggregation and transformation
- Hands-on use of Advanced Group By in Power Query
- Customer segmentation and product insight generation
- End-to-end ETL workflow (Extract → Transform → Load)

Dataset Preparation

Dataset
generated via
ChatGPT in
CSV format

Contained:
Product,
Customer,
Quantity, Price,
Purchase Date,
City, Payment
Mode

Simulated
real-world
purchasing
patterns

Included
duplicate
customer
entries

Importing Data into Power Query

Opened CSV in Excel using
Get Data → From Text/CSV

Verified column types and
headers

Loaded into Power Query Editor

Ensured dataset consistency before
transformation

Importing Data into Power Query

= Csv.Document(File.Contents("C:\Users\My Pc\Documents\Advanced Product Customer Grouping Analysis\Product Customer Sales"), [Delimiter=",", Encoding=System.Text.Encoding.UTF8, QuoteStyle=QuoteStyle.None])						
Column1	Column2	Column3	Column4	Column5	Column6

Cancel

Creating Custom Column

Used formula to combine all customers into one cell:

```
= Text.Combine([List of Customers][Customer Name], ", ")
```

- Converts nested list into a single text value
- Enhances readability and summary clarity

custom
column

Creating Custom Column

Custom Column

Add a column that is computed from the other columns.

New column name

List of Customer.1

Custom column formula ⓘ

= Text.Combine([List of Customer][Customer Name], ", ")

Available columns

Product Name

Product Count

Added Custom

Key Skills Demonstrated

Tools Used

Microsoft Power Query → Data Transformation

Microsoft Excel → Result Presentation

ChatGPT → Dataset Generation

Project Outcome

- ✓ Clean summary of unique products
- ✓ Automated purchase frequency calculation
- ✓ Combined customer names in one field
- ✓ Insightful data ready for BI dashboards
- ✓ Improved understanding of real corporate data cleaning

Future Enhancements

Integrate Power BI dashboards

Add filters for date, city, and payment mode

Include trend and segmentation visuals

Automate refresh for live data updates

Learning Outcomes from This Project

Hands-on
experience with
Power Query
transformations

Managed
repeated & messy
data efficiently

Understood
aggregation,
grouping, and text
combining logic

Built end-to-end
ETL workflows
(Extract →
Transform →
Load)

Strengthened
Excel-based data
analysis approach

Improved
analytical &
problem-solving
mindset

Real-World Relevance

Automation: Saved hours of manual work

Retail & Sales: Customer-product purchase tracking

E-Commerce: Combining customer orders across platforms

Healthcare: Patient-test mapping & frequency analysis

Corporate BI: Data cleaning for Power BI dashboards

Foundation for roles in Data Analytics, BI & Excel Automation
